Filamat Launches Product Configurator to Streamline Processes, Optimize Quality

Filamat has launched a custom Product Configurator that streamlines engineering processes and improves product quality.

The Configurator uses customized software developed by Experlogix for optimized consistency and accuracy and reduced engineering cycle time. Filamat leveraged its engineers' product knowledge to customize a system for the company that is an integral part of the enterprise-wide quality management system.

The Configurator increases the standardization of project estimates, making them quicker to generate and easier to modify. While many companies may take 1 to 2 days to generate a highly detailed quote, the Configurator provides the tools for Filamat engineers to frequently generate a quote in less than an hour.

The new system also integrates seamlessly with Filamat's ERP system to automatically generate work orders, routings and bills of materials.

"The new Product Configurator reduces costs, saves time and maximizes accuracy," said General Manager John Lambert. "We're very pleased, and so are our customers."

About Filamat

Filamat Composites Inc. is an ISO 9001-2000 certified original equipment manufacturer of fiber reinforced plastic products (FRP). Serving clients across North America, Filamat is an industry leader in FRP design, engineering, prototyping, development and manufacturing. Visit www.filamat.com.
