Filamat's Composite Technicians Pass ACMA Certification Test "with Flying Colors"

Reinforced plastic products innovator Filamat announced today that nine of its personnel have passed the American Composite Manufacturing Association's rigorous training program to become designated Certified Composite Technicians (CCTs).

The CCT program was created by the American Composites Manufacturers Association (ACMA) to respond to the needs of this increasingly competitive and technical field. CCT training places specific emphasis on the knowledge and skills required in production. The program has raised customer standards and provides a benchmark for manufacturing excellence.

Filamat's Quality Assurance Manager David Buchan, B.Comm., CCTI, an ACMA certified instructor, has lead two classes to success this summer with more certifications to come. Courses focus on manufacturing processes as well as the science of composites, molding, gel coating, spraying, fluid handling, safety and quality assurance.

A second team of eight Filamat staff and employees are awaiting notification from the ACMA, having just written their CCT exams. "We have an impressive team," said General Manager John Lambert. "I expect that this new class will also pass with flying colors."
